Disclosure to Promote the Right To Information

Whereas the Parliament of India has set out to provide a practical regime of right to information for citizens to secure access to information under the control of public authorities, in order to promote transparency and accountability in the working of every public authority, and whereas the attached publication of the Bureau of Indian Standards is of particular interest to the public, particularly disadvantaged communities and those engaged in the pursuit of education and knowledge, the attached public safety standard is made available to promote the timely dissemination of this information in an accurate manner to the public.

AMENDMENT NO. 1  MARCH 1984

TO

IS:7320-1974  SPECIFICATION FOR CONCRETE
SLUMP TEST APPARATUS

Alterations

(Pages 3, clause 2.1, line 2) - Substitute 'tamping bar' for 'tamping rod'.

(Pages 4, clause 4, Title) - Substitute 'TAMPING BAR' for 'TAMPING ROD'.

(Pages 4, clause 4.1) - Substitute the following for the existing matter:

'4.1 The tamping bar shall be a steel bar 16 mm in diameter, 600 mm long with a rounded working end'.

(Pages 7, clause 5.1, line 2) - Substitute 'bar' for 'rod'.

(BDC 2)
Indian Standard

SPECIFICATION FOR
CONCRETE SLUMP TEST APPARATUS

0.  FOREWORD

0.1 This Indian Standard was adopted by the Indian Standards Institution on 21 February 1974, after the draft finalized by the Cement and Concrete Sectional Committee had been approved by the Civil Engineering Division Council.

0.2 The Indian Standards Institution has already published a series of standards on methods of testing cement and concrete. It has been recognized that reliable and intercomparable test results can be obtained only with standard testing equipment capable of giving the desired level of accuracy. The Sectional Committee has, therefore, decided to bring out a series of specifications covering the requirements of equipment used for testing cement and concrete, to encourage its development and manufacture in the country.

0.3 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS: 2-1960*. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

1. SCOPE

1.1 This standard covers the requirements of the apparatus used for determining the slump of fresh concrete as a measure of its consistency.

2. APPARATUS

2.1 The apparatus shall consist of a mould for the test specimen and a tamping rod.

3. MOULD

3.1 Shape and Dimensions — The mould for the test specimen shall be in the form of the frustum of a cone as shown in Fig. 1 or 2 and internal dimensions as given in Table I.

*Rules for rounding off numerical values (revised).
### TABLE 1 INTERNAL DIMENSIONS OF MOULD

(Clause 3.1)

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Details</th>
<th>Dimension (mm)</th>
<th>Tolerance (see Note) (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>(1)</td>
<td>(2)</td>
</tr>
<tr>
<td>1</td>
<td>Bottom diameter</td>
<td>200</td>
<td>+3</td>
</tr>
<tr>
<td>2</td>
<td>Top diameter</td>
<td>100</td>
<td>+3</td>
</tr>
<tr>
<td>3</td>
<td>Height</td>
<td>300</td>
<td>±1.5</td>
</tr>
</tbody>
</table>

**Note**—Diameter and height measured anywhere on the mould shall not differ from the nominal dimension (that is 200, 100 and 300 mm) by more than the specified tolerance.

3.1.1 Where no tolerance has been specified for a particular dimension, it will mean that reference is being made to the nominal dimension.

3.2 **Material**—The mould shall be made of galvanized iron sheet or any other suitable metal not readily attacked by cement paste; aluminium shall not be used. The metal shall be at least 1.6 mm thick.

3.3 **Construction**—The mould may be constructed either with or without a seam. When a seam is provided, the seam shall be essentially as shown in Fig. 2.

3.3.1 The top and bottom of the mould shall be open and parallel to each other and at right angles to the axis of the cone. The internal surface of the mould shall be smooth and shall be free from dents and projections, such as protruding rivets.

3.3.2 The mould shall be provided with foot pieces and handles to facilitate lifting it from the moulded concrete test specimen. The shape and dimensions of the foot pieces and handles may be as shown in Fig. 1 and 2. Attachments shall be riveted, welded or brazed to the mould. Any rivet used in the construction of the mould shall be countersunk on the inside of the cone.

**Note**—A mould which clamps to a non-absorbent base plate or an apparatus with a suitable guide attachment for measuring height of the moulded concrete may also be accepted provided it otherwise conforms to the requirements of the specification.

### 4. TAMPING ROD

4.1 The tamping rod shall be a round straight steel rod, 16 mm diameter and 600 mm long. The tamping end of rod shall be rounded to a hemispherical tip, the diameter of which shall be 16 mm.
All dimensions in millimetres.

Fig. 1 Mould (Seamless) for Slump Test of Concrete
All dimensions in millimetres.

**Fig. 2** A Mould (with Seam) for Slump Test of Concrete
5. MARKING

5.1 The following information shall be clearly and indelibly marked on the mould and the rod in a way that it does not interfere with the performance of this apparatus:

   a) Name of manufacturer or his registered trade-mark or both, and
   b) Date of manufacture.

5.1.1 The apparatus may also be marked with the Standard Mark.

5.1.2 The use of the Standard Mark is governed by the provisions of Bureau of Indian Standards Act, 1986 and the Rules and Regulations made thereunder. The details of conditions under which the licence for the Standard Mark may be granted to manufacturers or producers may be obtained from the Bureau of Indian Standards.
